

Dashboard Reporting

Data is everywhere, yet on its own it's meaningless. Harnessed correctly, data can provide meaningful insights into your business and customers which can help you make informed decisions in a timely manner.

Do you want to:

- Make better business decisions?
- Solve business problems?
- Understand business performance?
- Improve business processes?
- Understand your consumers?

Whether it's presenting your financial information in a more understandable way, or reporting on all aspects of your business, if you have the data Ashton Wheelans can create a custom dashboard report that works for you.

ASHTON WHEELANS

We will work with you to:

- Identify your businesses strategic objectives and reporting requirements
- Identify your businesses current and potential data sources.

We will then:

- Design a report based on the story you want to tell
- Collate and cleanse your data to make it more meaningful

You will get:

- A fully integrated live report that provides relevant business insights in a meaningful way

"This has made getting access to information much easier. I can't believe I would ever have said financial reporting could be "Wow" – but this reporting is just that"

– Simon Gomez, Chairperson, Rakiura Maori Land Trust
